Build Back Better Act

Child Care Savings for Typical Family of Four

The Build Back Better Act makes a historic investment to lower the cost of child care for working families, expand the availability of high-quality child care, and raise wages for child care workers.

Under the plan advanced by the Committee on Education and Labor, the typical of family of four using center-based child care could save thousands of dollars every year. The Build Back Better Act’s child care investment would give families greater financial security, allow more parents rejoin to workforce, and help grow the economy.

Methodology

- Average child care costs are from [Child Care Aware® of America's January 2020 survey](#) of Child Care Resource and Referral State Networks.
- Child care cost estimates were not available for Montana. Instead, we use Child Care Aware of America's national averages to approximate child care costs in this state.
- All child care costs estimates are for full-time center-based care.
- Typical family of four is defined as a 4-person household making 100 percent of the [State Median Income](#) for a family of that size.
- Child care costs for family with one infant and one child are calculated based on rates for a 1-year-old infant and a 4-year-old child.
- Under the *Build Back Better Act*, families making 100 percent of the State Median Income would pay no more than two percent of their income on child care. Savings are projected by calculating the difference between the current average child care costs and two percent of income for families making the State Median Income.
